|---|----|
| FOREWORD | 6 |
| THE RULES OF WORKING IN THE BUILDING CHEMISTRY LABORATORY | 7 |
| 1. Safety and hygiene of work | 7 |
| 2. Basic operations conducted in the laboratory and the laboratory equipment | 10 |
| 2.1. Conducting of chemical reactions | 10 |
| 2.2. Weighing | 11 |
| 2.3. Measuring volume | 12 |
| 2.4. Titration | 13 |
| 2.5. Stirring | 18 |
| 2.6. Filtration | 19 |
| 2.7. Drying, heating and roasting | 20 |
| 3. General rules of preparation of results of tasks | 23 |
| EXERCISES MADE IN BUILDING CHEMISTRY LABORATORY | 24 |
| 4. Elements of chemical analysis | 24 |
| Theoretical background | 24 |
| <i>Use of chemical analysis in building engineering</i> | 24 |
| <i>Methods of separating mixtures</i> | 24 |
| <i>Chemical methods of analysis</i> | 25 |
| <i>Detection of cations and anions</i> | 27 |
| <i>Gravimetric methods of quantitative analysis</i> | 28 |
| <i>Volumetric analysis</i> | 29 |
| <i>Use of instrumental methods of chemical analysis</i> | 29 |
| <i>Spectroscopic methods</i> | 30 |
| <i>Electrochemical methods</i> | 33 |
| <i>Thermal analysis</i> | 33 |
| <i>Microscopic analysis</i> | 35 |
| Practical task 1. Identification of chosen cations | 35 |
| practical task 2. Identification of chosen anions and chemical compounds | 37 |
| practical task 3. Determining the content of sodium hydroxide in aqueous solution | 38 |
| 5. Rate of chemical reactions | 39 |
| Theoretical background | 39 |
| <i>The concept of rate of chemical reaction</i> | 39 |
| <i>Relation of rate of reaction to concentration of reactants</i> | 41 |
| <i>Relation of reaction rate to temperature</i> | 41 |
| <i>Relation of reaction rate to the presence of catalysts</i> | 42 |
| <i>Reactions in multiphase systems</i> | 43 |
| Practical task. Determining the influence of concentration of reagents and temperature on the rate of a chemical reaction | 43 |
| 6. Water in building | 46 |
| Theoretical background | 46 |
| <i>Basic properties of water</i> | 46 |
| <i>Influence of water contamination on the quality of concrete</i> | 47 |
| <i>Classification and requirements for the mixing water</i> | 49 |
| Practical task. Evaluation of usefulness of water for building purposes | 51 |
| 7. Cement binders | 56 |
| Theoretical background | 56 |

| | | |
|------------|--|-----|
| | <i>Production and composition of Portland cement</i> | 56 |
| | <i>Portland cement setting and hardening processes</i> | 58 |
| | <i>Mineral additives to concrete</i> | 61 |
| | Practical task 1. Computer simulation of cement hydration..... | 62 |
| | Practical task 2. Determination of soluble hydroxides in the fluid phase of cement paste..... | 67 |
| | Practical task 3. Determination of concrete contents..... | 69 |
| 8. | Lime binders | 73 |
| | Theoretical background..... | 73 |
| | <i>Types of lime binders</i> | 73 |
| | <i>Lime burning</i> | 73 |
| | <i>Lime slaking</i> | 75 |
| | <i>Setting and hardening of lime mortar</i> | 75 |
| | <i>Hydraulic lime</i> | 75 |
| | <i>Requirements for building lime</i> | 76 |
| | Practical task 1. Determination of active calcium oxide content in quicklime..... | 78 |
| | Practical task 2. Determination of non-decomposed calcium carbonate content in quicklime..... | 79 |
| 9. | Gypsum and anhydrite binders | 82 |
| | Theoretical background..... | 82 |
| | <i>Classification of gypsum and anhydrite binders</i> | 82 |
| | <i>Production</i> | 82 |
| | <i>Setting and hardening of gypsum binders</i> | 84 |
| | <i>Modification of gypsum setting rate</i> | 85 |
| | Practical task 1. Examination of influence of gypsum roasting conditions on Structure and setting properties of gypsum binders..... | 87 |
| | Practical task 2. Examination of influence of admixtures on setting time of gypsum binders..... | 89 |
| 10. | Silicate binders | 92 |
| | Theoretical background..... | 92 |
| | <i>Production and chemical constitution of water glass</i> | 92 |
| | <i>Water glass setting process</i> | 92 |
| | <i>Properties and applications</i> | 94 |
| | Practical task. Determination of water glass modulus..... | 95 |
| 11. | Resin binders | 97 |
| | Theoretical background..... | 97 |
| | Practical task 1. Examining the course of the hardening process of resin binders..... | 101 |
| 12. | Chemical modification of concrete | 104 |
| | Theoretical background..... | 104 |
| | <i>Classification of chemical modifiers of concrete</i> | 104 |
| | <i>Concretes with admixtures</i> | 104 |
| | <i>Plasticizing and fluidizing admixtures</i> | 105 |
| | <i>Air-entraining admixtures</i> | 108 |
| | <i>Admixtures controlling the setting time of a binder</i> | 108 |
| | <i>Concretes modified by mineral additives</i> | 109 |
| | <i>Polymer-cement concretes</i> | 110 |
| | <i>Polymer impregnated concrete</i> | 110 |
| | Practical task 1. Assessment of plasticizing properties of concrete admixtures..... | 111 |

| | |
|--|------------|
| Practical task 2. Effectiveness assessment of concrete surface hydrophobization | 112 |
| 13. Corrosion of construction materials | 114 |
| Theoretical background | 114 |
| <i>Definitions</i> | 114 |
| <i>Concrete corrosion</i> | 114 |
| <i>Metal corrosion</i> | 118 |
| <i>Protection of metals against corrosion</i> | 121 |
| <i>Reinforced concrete corrosion</i> | 122 |
| <i>Concrete carbonation and contamination</i> | 124 |
| <i>Corrosion of other construction materials</i> | 125 |
| Practical task 1. Studying the course of acid corrosion in cement concrete | 125 |
| Practical task 2. Assessment of depth of neutralization and contamination of concrete | 127 |
| Practical task 3. Determination of probability of corrosion of the reinforcing steel | 129 |
| APPENDIX | |
| Examples of calculations in building chemistry | 132 |
